### Supporting tables

**Table S1** - Information of 579 languages from literature (1), showing family affiliation, location, phoneme diversity and distance from the “best-fit origin” (2).

Notes: One tone stands for stress or pitch accent with weak lexical function. A star before the name indicates that the individual language was excluded from analyses for inter-family balance.

Continent	Family	Language	Population Size	Vowel Quality Inventory	Tone Inventory	Consonant Inventory	Normalized Vowel Diversity	Normalized Tone Diversity	Normalized Consonant Diversity	Total Normalized Phoneme Diversity	Latitude (N)	Longitude (E)	Distance from Africa	Distance from Central Asia	Distance from Europe

**Table S2 - Comparison of inter-family distribution between the sampled languages and all languages in Ethnologue.**

To balance among the linguistic families, a number of languages of Indo-European, Austronesian, and Chinese were excluded from analyses of this paper. The present inter-family distribution is similar to that of Atkinson's (2), and is not obviously biased from that of Ethnologue (3).

Sample of this paper			Atkinson's sample			All languages in Ethnologue		
Family	Count	Percent	Family	Count	Percent	Family	Count	Percent
Niger-Congo	56	10.98	Niger-Congo	62	12.30	Niger-Congo	1510	21.86

**Table S3 - Summary of Mantel and partial Mantel tests (1000 permutations) for correlations between total phoneme diversity and speaker population size and distance from the best-fit origin.**

To further test the robustness of these findings, we repeated regressions using Mantel and partial Mantel tests as Atkinson did. Mantel tests were carried out on the full language dataset in Arlequin 3.11 program (4), using differences in distance from the origin and log population size to predict differences in phonemic diversity.

Dataset	Test	N	Partial correlation with distance - <i>r</i>	Determination of diversity by distance	Significance (p-value)
Global raw data	Diversity vs distance from Africa	510	-0.436	0.190	<0.001
Global raw data	Diversity vs distance from Asia	510	-0.441	0.195	<0.001
Global raw data	Diversity vs distance from Europe	510	-0.438	0.192	<0.001
Global simplified data	Diversity vs distance from Africa	510	-0.134	0.018	<0.001
Global simplified data	Diversity vs distance from Asia	510	-0.063	0.004	<0.001
Global simplified data	Diversity vs distance from Europe	510	-0.091	0.008	<0.001
Global raw data	Diversity vs distance from Africa, partial with logged population size	510	-0.315	0.143	<0.001
Global raw data	Diversity vs distance from Asia, partial with logged population size	510	-0.320	0.147	<0.001
Global raw data	Diversity vs distance from Europe, partial with logged population size	510	-0.322	0.145	<0.001
Global simplified data	Diversity vs distance from Africa, partial with logged population size	510	-0.123	0.019	<0.001
Global simplified data	Diversity vs distance from Asia, partial with logged population size	510	-0.043	0.003	<0.001
Global simplified data	Diversity vs distance from Europe, partial with logged population size	510	-0.075	0.008	<0.001

**Table S4 - MM-estimators for models of total phoneme diversity as explained by distance from the best-fit origin.**

In order to minimize the possible influence of outliers, we used robust regression with MM-estimators (5) fitted in R (6) using the robustbase package. Largest Estimate was found in Asia when using raw data, while it was in Africa when using simplified data.

Dataset	Test	N	Estimate	Std.Error	t value	Pr(> t )
Global raw data	Diversity vs distance from Africa	510	$-4.345 \times 10^{-5}$	$2.843 \times 10^{-6}$	-15.283	$<2 \times 10^{-16}$
Global raw data	Diversity vs distance from Asia	510	$-6.918 \times 10^{-5}$	$5.167 \times 10^{-6}$	-13.390	$<2 \times 10^{-16}$
Global raw data	Diversity vs distance from Europe	510	$-4.378 \times 10^{-5}$	$3.172 \times 10^{-6}$	-13.804	$<2 \times 10^{-16}$
Global simplified data	Diversity vs distance from Africa	510	$-1.453 \times 10^{-5}$	$4.803 \times 10^{-6}$	-3.025	$<2.61 \times 10^{-3}$
Global simplified data	Diversity vs distance from Asia	510	$-1.160 \times 10^{-5}$	$8.318 \times 10^{-6}$	-1.394	$<1.64 \times 10^{-1}$
Global simplified data	Diversity vs distance from Europe	510	$-1.022 \times 10^{-5}$	$4.993 \times 10^{-6}$	-2.047	$<4.12 \times 10^{-2}$
